

FAQ on this document

What is this?	A draft statement of outcome from the Finance and Biodiversity Day, a one-day event for representatives of financial sector organisations to build alignment and share ambition, to be held on 14 December 2022 in the context of the second part of COP15 in Montreal.
Who wrote this ?	The initial drafting was facilitated by the Secretariat of the CBD. It is now being made available to a wider group of stakeholders involved in COP15, for review and comments. It will be updated and released on the day of the Finance & Biodiversity Day to reflect specific outcomes.
Is this a new commitment or a pledge? Is this legally binding?	No. This is designed to express key outcomes of a one-day event, and propose a plan of action for achieving the vision, 2050 goals and 2030 targets of the Global Biodiversity Framework to be adopted at COP15.
Who is it from?	This is framed as a statement from representatives of financial sector organisations present at COP15 Finance & Biodiversity Day.
Will you ask for signatures / endorsement	This document will not be submitted for formal signature by organisations. This said, expressions of endorsement will be welcome in support of ambition.
What is meant by “financial sector organisations”	Public and private organisations represented at COP15 Finance and Biodiversity Day – including public and private financial institutions, financial supervisory entities, multilateral organisations, sector initiatives.
Who is this targeted to?	To negotiators at COP15, as well as government policymakers, financial supervisory entities, private and public financial institutions, corporate investors.
How does this relate to previous statements / pledges / commitments	This builds upon, and is consistent with recent other declarations, proposals and pledges from political leaders and from financial sector initiatives, including the Kunming Declaration of the Parties to the CBD , the Leader’s Pledge for Nature , the 10 Points Plan for Financing Biodiversity , the COP26 Multilateral Development Bank’s Joint Statement on Nature , the Financial Sector Commitment Letter on Eliminating Commodity-Driven Deforestation , the International Development Finance Club’s Common Position Paper on Biodiversity , the Network for Greening the Financial System’s Statement on Nature-Related Financial Risks , the Finance for Biodiversity Pledge , the COP15 Statement from the Private Financial Sector , the Principles for Responsible Investments , the Principles for Responsible Banking , and the Principles for Responsible Insurance .
When and how will it be launched	On 14 December 2022, in the final plenary session of Finance and Biodiversity Day (18h Montreal time) followed by social media release
How will this be publicized ?	After the launch, the text will be publicized on COP15 media (web page, LinkedIn, Twitter)
What is the key message of this document ?	Nature is in crisis due to human and economic activities, enabled by financial flows. Nature loss, together with climate change and pollution, generates risks to investors, the economy, and society. There is growing voluntary but this is not enough for reversing nature loss at the speed & scale required by the vision, goals, targets of the post 2020 GBF under negotiation at COP15. The Financial Sector is calling for a course of action from policymakers, supervisors, and financial institutions and investors, based on: <ul style="list-style-type: none"> • Enabling environment (regulations, supervisory action, public-private dialogue, mainstreaming of nature within decision making, disclosure on risks and impacts) • Alignment of financial flows (incentives, targeted finance, no-targeted other financial flows) • Stakeholder engagement and public-private dialogue
How is this document structured	This includes: <ol style="list-style-type: none"> 1. A one-page introductory statement 2. In appendix, a recommended plan of action.

1 ***Proposed plan of action for aligning financial flows with the vision, goals and***
2 ***targets of the Global Biodiversity Framework***

3 Finance and Biodiversity Day at COP15 of the Convention on Biological Diversity
4 Montreal, Canada - 14 December 2022
5

6 Representatives from financial sector organisations¹ with high ambition on sustainability, globally,
7 gathered on 14 December 2022 at Finance and Biodiversity Day, a parallel event to the second
8 part of the 15th Conference of the Parties (COP15) to the Convention on Biological Diversity (CBD)
9 in Montreal, Canada.

10 The purpose of this event was to build alignment and shared ambition on aligning financial flows
11 with the shared vision, 2050 goals, and 2030 targets of the Global Biodiversity Framework,
12 expected to be adopted as outcome of COP15.

13 Human activities, including economic activities enabled by the financial sector through a vast
14 array of financial and investment services, have already led to the loss of vast amounts of species,
15 habitats, natural capital and ecosystem benefits worldwide². Scientific evidence shows that nature
16 loss is further accelerating at unprecedented rates in history. The global crisis of nature loss,
17 amplified by that of climate change and pollution, create an array of risks³ that threaten the stability
18 and resilience of the world's economy and society.

19 As an enabler of economic activity, the financial sector has an essential role to play in addressing
20 this crisis and achieving the shared vision of the Global Biodiversity Framework to be adopted at
21 COP15: putting the world on a path to reversing nature loss by 2030, and "living in harmony with
22 nature" by 2050.

23 Yet, today, a dominant proportion of global financial flows⁴ supports activities that harm, rather
24 than protect, nature. Finance aiming to create positive outcomes for nature⁵ represents a small
25 fraction of overall flows. There is limited consideration in financial policymaking and investment
26 decision-making of the need to protect, regenerate, and make sustainable use of, nature.

27 Increasingly, political leaders, financial organisations and investors step up to address this
28 challenge⁶. However, voluntary action cannot by itself bear full and sustained results. The world
29 needs an ambitious Global Biodiversity Framework to be adopted at COP15. This needs to be
30 actively implemented by countries, to catalyse a collective transition to an economy that protects,
31 regenerates, and make sustainable use of nature.

32 Negotiators at COP15 should adopt an agreement that creates the clarity and action to align all
33 economic actors, including financial institutions, to halt and reverse nature loss, contribute to
34 nature-based solutions to climate change and other sustainable development challenges, whilst
35 supporting a just and equitable ecological transition.

36 From the viewpoint of the financial sector, a robust agreement would: emphasize the imperative
37 of aligning financial flows with the shared vision, goals and targets of the Global Biodiversity
38 Framework ; promote the assessment and disclosure of nature-related risks, dependencies and
39 impacts (particularly for large and transnational businesses and financial organisations, as well
40 as others with significant risks, dependencies and impacts on nature); and enable the
41 development of a global pipeline of nature-positive projects and investments.

42 A proposed plan of action is presented in Appendix 1. This plan is for consideration by actors
43 within the whole of the financial sector, including private and public financial institutions,
44 supervisory entities, and policymakers. Collectively, they have the power to set society on a
45 transition to reverse nature loss and achieve a shared vision of "living in harmony with nature".

**Beyond COP15:
Proposed plan of action for aligning financial flows
with the targets and vision of the Global Biodiversity Framework**

Robust, cohesive and rapid action is needed to set the world on a path to achieving the 2030 targets and 2050 vision of the Global Biodiversity Framework. The following plan of action is proposed to relevant stakeholders within the financial sector, as well as from corporate investors.

This plan of action needs to be supported by policy and regulatory action from governments, as well as specific effort from public and private financial institutions to mainstream the consideration of nature and align financial flows. We recommend that it is implemented rapidly, yet progressively, in the perspective of a just transition, and supported by constructive public-private dialogue.

A. Prepare :setting a clear and consistent environment to catalyse action

All	<p>Recognise and emphasize the importance of nature loss as a source of systemic risks for organisations, the economy and society, and adhere to the shared vision, 2050 goals and 2030 targets proposed in the Global Biodiversity Framework.</p> <p>Recognise and leverage on the linkages between nature action and climate action in the perspective of mainstreaming and financial flows alignment.</p>
Government policymakers	<p>Adhere to the 10 Points Plan for Financing Biodiversity , strengthening recognition of the imperative to reverse nature loss by 2030, mainstreaming nature in policies and regulations, fiscal policies, economic incentives and subsidies, social and economic development planning, trade policies, climate-change and energy transition plans, poverty reduction strategies, overseas development assistance, at all relevant levels of government.</p>
Financial supervisory entities and central banks	<p>In line with the mandates defined by their government supervisory authorities, establish prudential requirements and reporting requirements for financial organisations on their exposure to, and management of, nature-related risks, impacts and dependencies, taking into consideration the ongoing works of the Network for Greening the Financial System (NGFS) and recommendations from the joint NGFS-INSPIRE working group on biodiversity and financial stability.</p>
Public and private financial institutions and corporate investors	<p>Build an organization culture that recognises the need for action on nature to reduce negative impacts, support activities with positive impacts, and achieve a sustainable use of natural capital – building on the recognition that nature-related risks, impacts and dependencies within value chains and asset portfolios threaten the resilience and long-term value creation of organisations.</p> <p>For private financial institutions, prepare for compliance with future requirements stemming from policymakers, regulators and supervisors. In the meantime, strengthen voluntary action, adhering to a relevant</p>

	<p>sector initiative for building commitment on biodiversity in finance, such as the Finance for Biodiversity Pledge, Principles for Responsible Banking, Principles for Responsible Insurance, Principles for Responsible Investment.</p> <p>For public financial institutions and public development banks, in accordance with their government mandates and their mission to invest in support of a wider set of social and economic development objectives, strengthen their contribution to the goals of the Global Biodiversity Framework in their strategies and operations, “taking into account the ongoing work of the International Development Finance Club (IDFC) and the Finance in Common coalition.</p>

62

B. Implement: taking action to align financial flows with the shared vision of the Global Biodiversity Framework

<p>Government policymakers</p>	<p>Further referring to the 10 Points Plan for Financing Biodiversity, Increase international financial resources towards biodiversity by mobilizing new, additional, predictable and timely resources from all sources to developing countries, taking into account developing country’s National Biodiversity Strategies and Action Plans (NBSAPs).</p> <p>Ensure that official development assistance flows do not harm biodiversity, and make use of all relevant opportunities to generate positive outcomes for nature, climate, and socio-economic development.</p> <p>Use financial and policy levers to mobilise biodiversity finance domestically, including through appropriate fiscal policies, green financial products, investment in green infrastructure and other nature-based solutions, payment for ecosystem services, and high integrity carbon markets to incentivize private financial flows.</p> <p>Reduce, ultimately eliminate, and repurpose, public incentives that are harmful to biodiversity, including regulatory, fiscal and trade incentives, in a socially just and equitable way, directing incentives towards activities that contribute to the shared vision, goals and targets of the Global Biodiversity Framework, making incentives positive or neutral for biodiversity by 2030.</p>
<p>Financial supervisory entities and central banks</p>	<p>In line with the mandates defined by their government supervisory authorities, enforce and through effective leadership and public-private dialogue, facilitate the implementation of prudential requirements on exposure to nature-related risks and impacts.</p>
<p>Public and private financial institutions and corporate investors</p>	<p>Assess, monitor, report upon, and disclose nature-related risks, dependencies and impacts, using voluntary science-based approaches such as under development by the Taskforce on Nature-related Financial Disclosures (TNFD), also aligning wherever applicable with regulatory disclosure requirements.</p> <p>Assessment and leverage opportunities to make investments with positive outcomes for nature, noting the ongoing emergence of guidance on investments that contribute to protecting and restoring nature (such as that</p>

	<p>being developed by the International Union for the Conservation of Nature and its Resources – IUCN) and the need to build consensus on a taxonomy of “nature positive” investments.</p> <p>Develop, adopt, and align with, science-based targets to reduce exposure to risks, dependencies and negative impacts, and generate positive outcomes, leveraging wherever possible on opportunities to build synergies between climate action and nature action. This should use recognized guidance such as that being developed by the Science-Based Targets Network (SBTN).</p> <p>Develop and promote financial solutions in support of activities with positive outcomes for nature, including nature-based solutions for combined action on nature and climate mitigation and adaptation. Build competitiveness, attractiveness, and work towards scaling-up those activities, making the most relevant use possible of public-private blended financial approaches and other innovative financing approaches.</p> <p>Reduce negative impacts to nature through engagement with companies, sector- and ecosystem -based policies (including exclusion policies), and effective, science-based application of internationally recognized safeguards.</p> <p>For public financial institutions and public development banks, mainstream biodiversity with a view to ambitiously scaling up biodiversity finance, using tools such as IDFC Toolbox on Integrating Biodiversity into Strategies and Operations of Development Finance Institutions</p>
--	--

63

64 **C. Supporting the mainstreaming of biodiversity through effective engagement**

<p>All</p>	<p>Strengthen public-private and wider stakeholder dialogue on nature, supporting the effective mainstreaming of nature within decision-making, and set the world on a transition to reversing the loss of, regenerating, and making sustainable use of, nature.</p> <p>Carry out and promote an appropriate level of engagement with indigenous people, local communities, and relevant groups within society, in the perspective of equitable access and benefit sharing.</p>
